

# **CleanTrust™**

## *Surface Protein Test Swab*

The **CleanTrust™ Surface Protein Test Swab** is a ready to use rapid test swab used to detect protein residues on cleaned surfaces. After smearing the surface of the object, if protein is present, the solution will change from green to purple. The faster and darker the color change, the higher the protein content.

## **Benefits**

- Easy to use, no extra reagent needed
- Visual interpretation, no instrument needed
- Quick and stable, result in 1-10 minutes

## **Sensitivity**

- Room temperature (20-25°C) :
- 80µg after 1 minute
- 50µg after 5 minutes
- 20µg after 10 minutes

## **Procedure**
